

EXISTING TREE WATERING

Every time a tree is watered, the soil should be thoroughly saturated to a depth of at least 2 to 3 feet and at least as wide as the tree well. Immediately after planting, new trees should be watered daily for the first 2 to 3 days, then use the appropriate schedule, depending on time of year / temperature. Very slow and deep watering is always recommended.

These watering schedules are based on average conditions in the area. They should be followed for at least the first 2 years after planting.

Fertilizing! One month after planting begin regular fertilizing with Moon Valley's custom blended fertilizers and nutrients, which are available at any of our locations or may be purchased online.

RECOMMENDED WATERING

EXISTING TREES 2 PLUS YEARS AFTER PLANTING / DAILY HIGH TEMPERATURE RANGE

TREE VARIETIES <small>(If you're not sure about your variety, please call)</small>	 SPRING	 SUMMER	 FALL	 WINTER
LOW WATER & WATERWISE VARIETIES	WATER 1 TIME EVERY 10 DAYS	WATER 2 TIMES PER WEEK <small>Water extra if 100° or more for extended time</small>	WATER 1 TIME EVERY 10 DAYS	WATER 1 TIME EVERY 14-21 DAYS
MODERATE WATER USE VARIETIES	WATER 1 TIME PER WEEK	WATER 2-3 TIMES PER WEEK <small>Water extra if 100° or more for extended time</small>	WATER 1 TIME EVERY 10 DAYS	WATER 1 TIME EVERY 14 DAYS
