

NEW TREE WATERING

Every time a tree or plant is watered, the soil should be thoroughly saturated to a depth of at least 2 to 3 feet and at least as wide as the well. Immediately after planting, new trees and plants should be watered daily for the first 3 to 5 days, then use the following to determine how much and when to water.

When watering, allow hose or drip system to very slowly apply the water over a longer period of time. This allows water to penetrate deeper and reach all areas of the roots. Remember, the goal is to water the entire root zone each time water is applied.

All Varieties During Hot Weather: During periods where the daytime high temperature exceeds 102°, please provide at least 1 additional time per week of watering for all varieties.

Adjust Watering for Rain: During periods of extensive rainfall, be sure to adjust watering accordingly. If you get a significant rain (1/2" or more) you should discontinue watering and resume approximately 5 to 7 days after rain ends (12 to 20 days if its winter).

Check Your Soil for Proper Water: An easy way to see if your soil is too wet or too dry is to use a long, rigid metal bar (a 3ft long piece of re-bar 3/8" or 1/2" diameter works well).

Push the rod into the soil around the base of the tree or plant. The rod should penetrate fairly easily to a depth of 18" (24" or more on larger trees). If the rod can't be inserted easily, the soil is too dry and you should water a little more often. If the rod goes in too easy and comes out muddy, adjust watering to be a little less frequent. By checking this a few times during the first couple months, you will get a good "feel" for how fast or slow your soil dries out and can adjust your watering frequency accordingly.

These watering schedules are based on average conditions in the area. They should be followed for at least the first 2 years after planting. You may have soil or water conditions that dictate slightly more or less watering frequency. Please contact us if you have any questions in regard to watering or caring for your newly planted trees.

RECOMMENDED WATERING

NEWER TREES FROM 0-2 YEARS FROM PLANTING / DAILY HIGH TEMPERATURE RANGE

TREE VARIETIES <small>If you're not sure about your variety, please call</small>	SPRING 70° TO 85°	SUMMER ABOVE 85°	FALL 70° TO 84°	WINTER BELOW 70°
LOW TO MEDIUM WATER USE VARIETIES	WATER 1-2 TIMES PER WEEK	WATER 2-3 TIMES PER WEEK	WATER 1-2 TIMES PER WEEK	WATER 1 TIME EVERY 7-10 DAYS
TROPICAL VARIETIES	WATER 2 TIMES PER WEEK	WATER 3-4 TIMES PER WEEK	WATER 2 TIMES PER WEEK	WATER 1 TIME EVERY 7-10 DAYS
